New canine heavy and light chain variable domain polypeptides, useful for treating canine allergy.

Disclosure; Page 24; 130pp; English.

The invention relates to a novel canine heavy or light chain variable domain polypeptide. The protein of the invention demonstrates antiallergic activity and may be useful for treating canine allergy, possibly via gene therapy. The current sequence is that of a canine immunoglobulin light chain variable domain complementarity determining region (CDR) peptide of the invention.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176 and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

heavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal epithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alphaébeta4 integrin. This is a tumour-associated antigen. The antibody, and its fragments, are useful for treating conditions based on anti-anglogenic mechanism in humans.

The present sequence represents a Monkey antibody light chain linked to a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and encoded proceins thereof. Specifically, it refers to the isolated genes of the African malaria mosquico that are related to the 'classical' brosophila odourant receptor genes, and compounds that bind to and modulate these receptors cause various behavioural responses such as mating, repulsion or flight. Accordingly, the present invention describes such compounds (both natural and synthetic) that are useful for attracting insects to traps or to localised toxins, for repelling insects from individuals or populated residential areas, or for interfering with the function of olfactory system such that insects are unable to locate damage and the spread of disease, and will significantly reduce dependence on toxic pesticides having a direct and immediate impact on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel Anopheles gambiae odorant receptor polypeptides and nucleic acid encoding the polypeptides, useful as targets for identifying pest control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                coordinated insect management programs. This polypeptide sequence is a
Drosophila melanogaster odourant receptor protein, which is homologous to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel Anopheles gambiae odourant receptor genes
                                                                                                                                                                                                                                                                                                                                                         odourant receptor; fruitfly; mating; repulsion; flight; insect damage; disease spread; pesticide; insect management program.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human nucleic acid management-associated DKFZphtes3_2m18 homologue.

This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, neutralising antibody, interleukin-12; IL-12; antiinflammatory, complementarity determining region, CDR, antirheumatic; antiarthritic; antisolarotic; neuroprotective, antipsoriatic; antiasthmatic; cardiant, antiparastic; antibacterial; immunosuppressive; Crohn's disease; multiple sclerosis; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Myles A;

New human antibody specific for human interleukin-12 (IL-12) used

```
This invention relates to a new human antibody specific for human contextentions that bind to IL-12. The invention also includes antigen binding portions that bind to IL-12. Sequences ABB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences. ABB39485-B39516 regions are amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B3956 and AAB40066-B40149. Sequences AAB39517-B3956 and AAB40066-B40149. Sequences AAB39518-B39771 represent anti-IL-12 CDR3 related amino acid sequences. AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are cyeven the AAB40067-Primers used in the identification and construction of the antibody seed in the identification and construction of the antibody of the invention is a neutralising antibody and has construction antiportic, antisolametory; cardiant, antiporasitic, antisolametory, antibocorrective, antipocorrective, antisolametory, contibocorrective, antipocorrective, antisolametory, antipocorrective, antipocorrective, antisolametory, antipocorrective, antipocorrective, antipocorrective, antipocorrective, antisolametory, antipocorrective, antipocorrective, antisolametory, antipocorrective, antipocorrecti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

and New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives.

Claim 11; SEQ ID NO 1561; 980pp; English

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used

```
immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays

(ELISA). Disorders which are disgnosed or treated include autoimmune

(ELISA). Disorders which are disgnosed or treated include autoimmune

(ELISA). Disorders which are disgnosed or treated include autoimmune

(ELISA). Disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cerebral ischaemia, angiogenesis,

cardiovas system disorders e.g. Alzheimer's disease, infections caused by

bacteria, viruses and fungi and ocular disorders e.g. corneal infection,

and many other disorders listed in the specification. The polypeptides

can also be used to aid wound healing and epithelial cell proliferation,

cornesplantation, for supporting cell culture of primary tissues, to

cregenerate tissues and in chemotexis. The polypeptides can also be used

as a food additive or preservative to increase or decrease storage

N-PSDB; ABX73936

New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or renal disorders.

Claim 11; SEQ ID NO 1561; 402pp; English.

The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lugus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left cart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood infarction) and cancerous diseases. Sequences ABUS4914-ABUS5699 and ABUS5748 represent human novel polypeptides of the invention

                                                                                                                                                                                                                                                            Region
                                                                                                                                                                                                                                                                            Region
                                                                                                                                                                                                                                                                                            Region
                                                                                                                                                                                                                                                                                                             Region
                                                                                                                                                                                                                                                                                                                              Region
                                                                                                                                                                                                                                                                                                                                              Region
                                                                                                                                                                                                                                                                                                                                                               Region
                                                                                                                                                                                                                                                                                                                                                                               Region
RESULT 10
       ADH44202
```

This invention describes a novel single-chain fragment of human antibody

Claim 8; SEQ ID NO 58; 78pp; German.

```
that inhibits replication of hepatitis C virus (HCV) and comprises the variable regions (VL and VH) of the light and heavy chains of an antibody directed against at least one essential viral protein. The invention also describes a method of identifying antibody fragments that inhibit creplication of HCV. The protein is an envelope, core or non-structural protein, especially BL BZ, core, NS3-protease or -helicase, NS4A coffector or NS5B RNA polymerase (especially a NS3 helicase). The VL and VH regions may be linked covalently or through a linker, particularly a hydrophilic and/or flexible peptide. The single chain fragment may also be linked to a non-protein polymer and where intended for diagnosis, it may include disulfide bridges. The method of the invention involves identifying a DNA library of antibody fragments against one or more essential HCV proteins prepared from bone marrow of patients with chronic HCV proteins prepared from bone marrow of patients with chronic HCV unfection. The library is cloned and expressed on the surface of phages. Phages that express fragments with high affinity for essential proteins are selected by many cycles of selection and reamplification (panning). Sequences that encode the selected fragments are then cycles of selection and reamplification (panning). Sequences that encode the selected fragments of the invention or for gene. The invention have virucide, hepatichs in a colling end and structure of single chain fragments are used to propare vaccines, especially for passive immunisation and for diagnosis of HCV infection or for gene therapy of HCV. The sequence and structure of single chain fragment is useful for gene therapy of HCV. The sequence and structure of single chain fragment as the used for design of HCV protein inhibitors. This sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating subplyment. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AgG00010-Ag303377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the vivo.int/pub/published_pct_sequences
                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                     sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents MOP9, a novel member of the PAS superfamily, where PAS stands for PER/ARNT/SIM domains. MOP9 cDNA (see AAX58988) was cloned from human brain mRNA. MOP9 displays extended
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 36; DB 4; Length 438; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Clock gene Baml2 and expressed clock protein BWAL2 important in clock oscillation mechanism and relating to circadian rhythm, used in diagnosis of and developing drugs for insomnia and other sleeping disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, aleep-phase forward or retreat syndrome and time-zone variation syndrome. ABG92865-ABG92879 represent BMAL2 amino acid sequences of the invention. (Updated on 29-AUG-2003 to standardise
homology to MOP3 (see AAY06291). It pairs with CLOCK and MOP4 (see AAY06292) and binds an E-box element with flanking region specificity. The invention provides novel MOP 2-9 nucleic acids (see AAX06289-97). These are useful in a variety of research, diagnostic and therapeutic applications. Several of the MOP8 are alphaclass hypoxia-inducible factors. Others are involved in circadian signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; clock protein BMAL2; brain-muscle-Arnt-like protein 2; insomnia; sleeping disorder; non-24-hour sleep; sleep-phase forward; retreat syndrome; time-zone variation syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

```
The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to encoded secreted proteins. The nucleic acids and proteins are used to revenit treat or ameliozate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic munuoassays e.g. radioimmunoassays or enzyme linked immunosobant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiacd arrest, cerebrovascular disorders e.g. cardiac and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to preserve the stin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present

New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or renal disorders.

Claim 11; SEQ ID NO 1139; 402pp; English

The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemaic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. came titles in asal polyps and sinusitis), reproductive disorders, congenital heart defects, Ebstein's anomaly and hypoplastic left cheart syndrome), renal disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left cheart syndrome), inflammatory diseases (e.g. acute kidney failure and end-stage leukaemia), inflammatory diseases (e.g. septic shock, bursitis and capendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial inflammatory minantials and successis and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial inflammatory humantials of the invention and cannectous diseases. Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
APPLICANT: Gary Breton et. al
TITLE OF INVENTION:
TITLE OF INVENTION: PREUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION WIGHER: US/09/489,039A
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 11409
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Patent No. 6610836

GENERAL INFORMATION

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: PREMIONARE FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: PREMIONARE FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF ILINGBATES: 2009-2004001

CURRENT FILING DATE: 2000-01-27

PRIOR APPLICATION NUMBER: US 60/117,747

PRIOR FILING DATE: 1999-01-29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1139, Application US/09764864

Patent No. US20020132753A1

GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REPRESENT
CURRENT APPLICATION NUMBER: US/09/764,864

CURRENT FILING DATE: 2001-01-17
Prior application data removed - consult PALM or file wrapper
NUMBER OF SEQ ID NOS: 1792
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                            Score 36; DB 15; Length 588;

C;Date: O6-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 09-Sep-1997'
C;Accession: S42894
A;Description: Nucleotide sequence of genomic and cDNA clones encoding an extracellular A;Accession: S42894
A;Reference number: S42894
A;Status: preliminary
A;Molecule type: DNA
                                                                                                                                                                                      RESULT 3
$561435
metalloproteinase (EC 3.4.24.-) precursor - Aspergillus fumigatus
C;Species: Aspergillus fumigatus
C;Species: 14-Feb-1997 #sequence_revision 13-Mar-1997 #text_change 29-Jan-1999
C;Accession: 861435; $561436; $561450
R;Jaton-Ogay, K.; Parris, S.; Huerre, M.; Quadroni, M.; Falchetto, R.; Togni, G.; Latge, Mol. Microbiol. 14, 917-928, 1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 5
G71607
probable integral membrane protein PFB0735c - malaria parasite (Plasmodium falciparum)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó

Radentation and initial analysis of more than 15,000 full-length human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation
     Note=No experimental confirmation available. May result from the retention of an intron in the CDNA;

-I. TISSUE SPECIFICITY: Expressed in the spleen, testis, heart, brain, lung, liver, skeletal muscle, and kidney.
-I. SIMILARITY: Belongs to the 5'-3' exonuclease family.
-I. SIMILARITY: Contains 1 CCHC-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and mouse CDNA sequences.",
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Possesses 5'->3' exoribonuclease activity and may be involved in homologous recombination and RNA metabolism, such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Event=Alternative splicing; Named isoforms=2;

                         Xbb-, in which Xaa is preferably Leu, but may be other amino acids including Pro although not Arg or Lys, and Xbb may be Pro.
-!- CORACTOR: Binds 2 manganese ions per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to peptidase family M17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-FEB-2003 (Rel. 41, Created)

                                                                                                  eimilarity).
--- CATALYTIC ACTIVITY: Release of an N-terminal amino acid, Xaa-|-Xbb., in which Xaa is preferably leu, but may be other amino acids including Pro although not Arg or Lys, and Xbb may be Pro.
--- COPACTOR: Binds 2 manganese ions per subunit (By similarity).
--- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
--- SIMILARITY: Belongs to peptidase family M17.

immunoglobulins and Teal receptors are assembled from variable (V), diversity (D), and joining (J) gene segments. This combinatorial process, known as V(D)V recombination, allows the generation of an enormous range of binding specificities from a limited amount of genetic information. The RAGI/RAG2 complex initiates this process by binding to the conserved recombination signal sequences (RSS) and introducing a double-strand break between the RSS and introducing a double-strand break between the RSS and the adjacent coding segment. These breaks are generated in two steps, nicking of one strand (hydrolysis), followed by hairpin formation (transesterification). RAGI/2 has also been shown to function as a transposase in vitro, and to possess RSS-independent endonuclease activity (end processing) and hairpin opening. RAGI alone can bind to RSS but stable, efficient binding requires RAG2. All known catalytic activities require the presence of both proteins (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   bone marrow of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kawai J., Shinagawa A., Shibata K., Yoshino M., Itoh M., Ishii Y., Arakawa T., Hara A., Fukunishi Y., Komo H., Adachi J., Fukuda S., Alzawa M., Izawa M., Nishi K., Kiyosawa H., Kondo S., Yamanaka I., Saito T., Okazaki Y., Gojobori T., Bono H., Kasukawa T., Saito R., Kadota K., Matsuda H.A., Ashburner M., Batalov S., Casavant T.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -i- TISSUE SPECIFICITY: Is expressed within the thymus, liver and spleen in juvenile frogs, and within the thymus and bone mark adults. A lower level expression is seen in the ovaries.
-i- SIMILARITY: Belongs to the RAG2 family.

-!- PATHWAY: Alpha-oxidation of 3-methyl branched fatty acids (phytanic acid); third step.
-!- SUBUNIT: Homoterramer (By similarity).
-!- SUBCELLULAR LOCATION: Peroxisomal (By similarity).
-!- SIMILARITY: Belongs to the TPP enzyme family.
                                                                                                                                                                           "Functional annotation of a full-length mouse cDNA collection."; Nature 409:685-690(2001).

Genome Res. 13:1042-1055(2003).

-!- FUNCTION: Has an important function as a repair enzyme for proteins that have been inactivated by oxidation. Catalyzes the reversible oxidation-reduction of methionine sulfoxide in proteins to methionine (By similarity).

-!- CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine S-oxide + reduced thioredoxin.

-!- SIMILARITY: Belongs to the msrA Met sulfoxide reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCE FROM N.A.

Natl. Acad. Sci. U.S.A. 99:4668-4673 (2002).

-!- FUNCTION: Has an important function as a repair enzyme for proteins that have been inactivated by oxidation. Catalyzes the reversible oxidation-reduction of methionine sulfoxide in proteins to methionine (By similarity).

-!- CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine Soxide + reduced thioredoxin.

-!- SIMILARITY: Belongs to the msrA Met sulfoxide reductase family.

PROTEINS AND PEPTIDES IN ACIDIC SOLUTION, AND IS THERMOSTABLE. IT HAS MAXIMAL PROTEOLYTIC ACTIVITY AT PH 2 AND 90 DEGREES CELGIUS.

CHALYTIC ACTIVITY: Specificity similar to pepsin A, prefers bulky hydrophobic side-chains on either side of the scissile bond.

CHROUGH SOME SIDE CHAINS.

THROUGH SOME SIDE CHAINS.

CHALYTIC ACTIVITY: AND THE CHAINS.

Weissenbach J., Ehrlich S.D., Sorokin A.; "The complete genome sequence of the lactic acid bacterium Lactococcus lactis ssp. lactis IL1403."; Genome Res. 11:731-753(2001).
                                                                   FUNCTION: Has an important function as a repair enzyme for proteins that have been inactivated by oxidation. Catalyzes the reversible oxidation-reduction of methionine sulfoxide in proteins
                                                                                                                      to methionine (By similarity).
--- CATALYITC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine S-oxide + reduced thioredoxin.
--- SIMILARITY: Belongs to the msrA Met sulfoxide reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
